DHCP within LAN

- DHCP uses UDP as transport layer protocol
  We make server as DHCP Server so that all end devices dynamically get IP address.

  Outcomes:

- We learnt to make DHCP Server
- How to dynamically assign IP-address to end devices
- DHCP DORA process stand for following messages between client and server.

Message flow between DHCP client and the Server.

- We C.

- We Configured the Server put the Start, end range, no. of users after turning ~~DHCP~~ DNS ON in DHCP and see that IP address is Configured.
